Projects

- Bussiness Management software(Crossplatform software)**
Across platform project that saves data for a bussiness and gives insighths about the business. Through the software a bussness can see the performance of the bussiness and make decisons through the given analytics.
Also the software includes barcodes canning reducing the need of having a physical scanner which reduces cost to people in need of software to manage there business.
- Onine clearance system**
A web based system that helps Educational institutions and organizations to process students clearance in a paperless form and complete theprocess in a short time.
It can be used by varous institutions which needs to verify a person like hospital, schools, institutes etc.
- Practical training Management system for Academic institutes/organization**
A web based system where students can submit there daily activties and final report performed in their respective area of practical training. Supervisors can see and access activtivities remotely with the need of physical paper logbook.
Onsite supervisors can also validate the activities that are done are indeed correct to what the student has submitted in the system.
- Balance diet at your place**
A project helps people to find foods they like which is well balanced to have necessary nutrients in the current locationt they are at the moment.
Food vendors are limited that all foods they putin the system should have all necessary balance diet ingredients.
Link below shows a brief demo on how a project works.
<https://m.youtube.com/watch?v=84AUz5bf4pg>
- Rent record keeping system**
